

Design Floors

High-end seamless floors

Superbase Classic Nature (Blend)

Superbase Classic Grey Light (Blend)

EPI Superbase Classic

The EPI Superbase Classic is renowned for its simplicity and aesthetic qualities, serving as the foundation of the Superbase family. This seamless floor is a durable and comfortable polyurethane flooring system based on vegetable oils, such as castor oil, and natural fillers. The cast floor system retains its elastic properties and color stability, even under the influence of UV radiation.

The EPI Superbase Classic is available in unique EPI Solid and Blend colours. The entire colour collection is available on our website: epidanmark.dk/farve/

Specifications Superbase Classic

EPI Floors: Designed for Life.

Calm, spacious, and robust, perfectly complementing any interior style.

EPI's seamless floors

- Often more sustainable than wood and PVC
- A lifespan of over 30 years
- Highly compatible with underfloor heating
- Calm, spacious, and robust
- Also available in warm and natural colours

EPI's Design

In addition to being beautiful and robust, a new floor should also be practical. Our EPI design team is constantly innovating and improving our products, focusing on aspects like stretch-testing and maximizing sound-dampening effects. They also prioritise the durability of the materials used in our floors. We are committed to finding the perfect formula without compromising aesthetics, ensuring every EPI floor complements your home, furniture, and lifestyle.

A sustainable choice

As a company, we believe in a happy and healthy future for our colleagues and future generations. We are responsible for producing our products as sustainably as possible, with EPI's products consisting largely of natural ingredients, such as biopolymers. We aim to minimise our carbon footprint on all fronts, leading the way in transparency in the supply chain.

5 Decades of EPI

Since our inception in the 1980s, we have been an authority on seamless floors. Layer by layer, we have built a company that is not only smart and innovative but also sustainable. Our products provide a solid foundation for every aspect of life, from industry to sports, office to home. EPI's floors are already present in more than 75 countries—from Utrecht to Qatar and from the Faroe Islands to Brunei.

From our own factory in Houten, we focus on creating cast floors of the highest quality and providing excellent service—from the first contact to the first step on your new floor. You are more than welcome to experience this for yourself at our Experience Centre.
